

SAN PITCH RIVER DISTRIBUTION SYSTEM

1952 Assessment

* * * \$2,050.00 * * *

Basis of Assessment

The 1952 Assessment of \$2,050.00 (see minutes of annual meeting) is based upon the official report of the Water Commissioner for water reported as having been delivered to such listed water users. The total amount of water is reported as 29,209.00 acre-feet

(NOTE: It may be advisable after five (5) years of records are maintained to calculate the yearly assessment upon a five (5) year "average" of delivered acre-feet of water).

Calculation 1952 Assessment

\$2,050.00 divided by 29,209.00 acre-feet of water gives
\$.0701838474 cost for one acre-foot of water.

Therefore this factor (\$.0701838474) is used for all listed water users as reported in the Water Commissioner's report. Further, the State Engineer has decided not to request voluntary contributions from any of the water users (as listed within the Cox Decree) where his Water Commissioner does not deliver water, such as seepage, etc. However, if the Committee or some agency does forward to his office such similar funds, they will be duly accepted and credited to the Bank Reserves of such River Distribution System.
